REASON FOR ALLOWANCE

1. Holland and Egan disclose various types of system that extend a paved roadway across a pair of parallel spaced apart rails using a gauge panel between the pair of rails, a pair of seals comprising a based secured to the pavement. Raymond discloses an embedded track assembly comprising a rail base, a pair of rail members coupled to the base by a rail clip assembly, an elastomeric member insert used to electrically insulate the track rail from the surrounding ground surface. Speer discloses a railway crossing comprising a rail a resilient strip inserted in a channel beside the rail to provide cushioning support to the wheels. However, none of the references of record suggests an improved railway crossing comprising a liner assembly, wherein a liner is bonded to an upper vertical edge of said base portion a predetermined clearance distance from said pair of rail members which defines a flangeway is provided, whereby said liner is formed of a substantially thin layer of ultra high molecular weight polyethylene material and serves to prevent wear of said base in the manner defined in the instant claims 1, 9 and in combination with other limitations of the claim. Therefore, claims 2-8, 10-15, depending therefrom, are considered to be allowable.
